

Your Home Is Ready For Winter. Is Your Supply Chain?

When severe winter weather conditions are forecasted, it is not unusual to scramble with last-minute preparations. We run to the store for batteries and back-up energy sources, fill up our gas tanks, and stockpile extra necessities all to ensure we are prepared for what is forecasted to come.

And these are often just the last minute preparations. Even before the winter season, homeowners are winter proofing their homes, motorists are readying their vehicles with new tires; there seems to be no shortage of measures which need to be taken to combat the winter freeze.

But as a shipper, are you taking the same common sense approach to winter in your supply chain as you are in your daily life?

Critical supplies to hospitals, latex-based paints, chemicals, and food & beverage items are just some of the many water-based commodities exposed to greater risk of damage in freezing conditions. When you factor in production delays, long miles in-transit, and the customer dissatisfaction of receiving damaged products, you simply cannot afford to overlook winter proofing your supply chain.

Just like those in a long line at the last minute, some carriers are more prepared than others. Operating in the Northeast U.S. since 1924, at A. Duie Pyle we are always ready for winter. With hundreds of heated trailers, snow-removal equipment, campus generators and advanced shipment routing, we deliver service which never shuts down or puts your freight at risk of freezing in the extreme cold.

Do you have temperature-sensitive shipments? Help guarantee they are protected with [A. Duie Pyle's Protect From Freeze Service](#)
